SUMMARY

Backend-focused Computer Science undergraduate with hands-on experience building distributed, scalable systems — including a rate-limiting service, a microservices-based pet adoption platform, and a search engine indexer. Strong foundation in data structures, algorithms, and databases; Guardian-level competitive programmer (2132 peak rating, 1,000+ problems solved) with experience in developing and deploying backend systems.

EDUCATION

Guru Gobind Singh Indraprastha University, Delhi, India

2023 – 2027

Bachelor of Technology in Computer Science and Engineering — GPA: 8.6 / 10

PROJECTS

Lymit — Rate Limiter as a Service

- Built a distributed rate-limiting service that lets developers protect REST APIs **without modifying application code**, supporting Global, User, API-Key, and IP-based policies.
- Designed Redis-backed request counters for **low-latency rate-limit evaluation**, enabling efficient request validation with persistent configuration storage in PostgreSQL.
- Architected and deployed a modular microservices system in Spring Boot exposing REST APIs for route registration, policy management, and request validation.
- Deployed the service on Railway with Redis (Upstash) and PostgreSQL (Supabase) as managed backends, demonstrating a full cloud-native deployment pipeline.

Tech Stack: Java, Spring Boot, Redis (Upstash), PostgreSQL (Supabase), Maven, Railway, Git

Pawluxe — Pet Adoption Platform

- Developed a microservices-based pet adoption platform connecting users with rescued and abandoned pets through browsing, filtering, and adoption workflows.
- Implemented secure OTP-based authentication and role-based authorization for user and admin roles.
- Designed normalized relational database schemas for users, pets, and adoption records, and integrated AWS S3 for scalable, secure pet-image storage.
- Built RESTful APIs for end-to-end user and pet management, forming the core service layer of the platform.

Tech Stack: Java, Spring Boot, PostgreSQL, AWS S3, Maven, Git

Search Engine Component — Web Crawler & Reverse Indexer

- Built a modular backend search engine capable of crawling, parsing, and indexing web pages for fast keyword-based retrieval.
- Implemented a crawling and text-processing pipeline — HTML parsing, tokenization, and stop-word removal — feeding an inverted index for efficient lookups.
- Applied Clean Architecture principles to separate crawling, processing, and indexing layers, improving maintainability and testability.

Tech Stack: Java, Spring Boot, Jsoup, PostgreSQL, Maven, Git

SKILLS

Programming Languages: Java, C++, C, Python, Go, SQL, HTML, CSS, JavaScript

Core Concepts: Data Structures, Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Databases: PostgreSQL, MongoDB

Frameworks & Tools: Spring Boot, Redis, Kafka, NumPy, Pandas, Matplotlib, Git

Languages Spoken: English, Hindi

ACHIEVEMENTS

- Solved 1,000+ problems across competitive programming platforms including [LeetCode](#), [Codeforces](#), and GeeksforGeeks.
- Achieved Guardian rank on LeetCode with a peak contest rating of 2132, placing among the top competitive programmers on the platform.

CERTIFICATIONS

- [Programming, Data Structures and Algorithms Using Python](#) — NPTEL, in association with IIT Madras.
